Investigation of the week 3<sup>rd</sup> May

78 year old man with multiple co-morbidities presents with lethargy and vomiting. His ECG is shown below.

- 1. What are the abnormalities on the ECG.
- 2. What is the most likely cause of this?
- 3. Give 2 other differential diagnoses. What other features on the ECG make them NOT the likely cause of the ECG abnormalities?
- 4. Complete the table below for treatment options.

Agents	Mechanism of action	Dose and route	Onset of action
