Instructions on how to create a PoCUS in EMR

It is expected that all emergency department performed ultrasounds at TSH are documented in a separate note on EMR. Here's how.....

Add a *progress note* and type the following in the document (you can copy and paste from here if you have this document open whilst creating the note):

| Examination name: |
|---|
| US operator: |
| Machine used: |
| Binary clinical question(s): |
| Examination findings: |
| Answer to clinical question(s): |
| Do findings alter patient management?: y/n/how? |
| Follow up actions required: |
| Ultrasound qualification held (if applicable): |
| Credentialed Supervisor's name and qualification: (If supervisor not accredited please give additional details of nominated FACEM accepting responsibility for this scan) |

Whilst the document is still open, at the top of the screen, go to *Documentation*, and you have the option there to *Save as Precompleted Note*.

Give it the name 'ED Point of Care Ultrasound Note' and select Save as New

| | *Note title: | ED Medical - Resp Exam | | | |
|---|-------------------------------------|-------------------------|--------|--|--|
| | Encounter pathway(s): | General Exam Adult eMED | s | | |
| | C Save as shared precompleted note. | | | | |
| ñ | Saug as Many | Hodate Existing | Cancel | | |

When you are ready to add your precompleted note in the future, you will find it in the *precompleted* tab. This is visible every time you select to start a new note on EMR. On occasions the notebook will be found in the *existing or catalog* tab under the progress note options.
