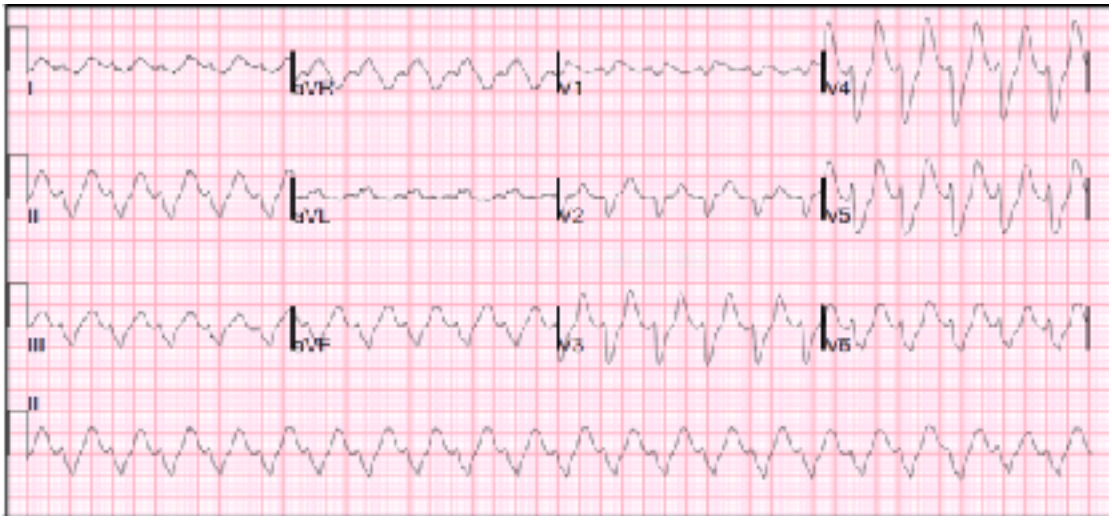
Investigation of the week 3rd May

78 year old man with multiple co-morbidities presents with lethargy and vomiting. His ECG is shown below.



1. What are the abnormalities on the ECG.

2. What is the most likely cause of this?

3. Give 2 other differential diagnoses. What other features on the ECG make them NOT the likely cause of the ECG abnormalities?

4. Complete the table below for treatment options.

Agents	Mechanism of action	Dose and route	Onset of action
